Student at University of Washington Bothell passionate about programming and cybersecurity.

Education

2020 - Present

Intended Major in Computer Science and Software Engineering: Information Assurance and Cybersecurity (Bachelor), University of Washington - Bothell

Technical Experience

Projects

- **Family Business:** Designed and developed a static website for a family business using HTML, CSS, and JS. The website offers responsive design using media and flex.
- **Weather API:** Created a weather app using API. I used HTML/CSS and JavaScript to fetch API and make changes to the content. It displays the location, temperature, condition, and date.

- **Restaurant Order Program:** Made using Java, It is like ordering food from a restaurant and after the food order, it would give a receipt. Also has the option to download it.
- **Portfolio:** my portfolio shows my projects, intro about me, contact form, and image gallery of my photos that I've taken. I used HTML/CSS and Javascript. Used pseudo animations, API, binary search, quick sort, HTML DOM manipulation, local storage, etc.
- **Calculator:** Made using Java GUI. It calculates from left to right with no order of operations.
- **UWB Hackathon 2021:** we made an alternative of the course catalog of UW. I worked on the HTML/CSS of the contents and responsiveness. Kyle Huynh worked on the javascript for the table. We actually made two versions, one using Figma by Bailey. Group members: Kyle Huang, Bailey Marie, Kyle Huynh, Kyle Fukuda, and Gwen Furiato.

Certificates

September 2020

- Responsive Web Design (freeCodeCamp)

Autumn 2021

- Learning React.js
- Excel 2016: Introduction to Formulas and Functions
- Excel Essential Training (Office 365/Microsoft 365)

Skills

Hard

Java, HTML, CSS, JavaScript, Excel, ReactJS (basic), Python, (basic)

Soft

Communication, Flexibility, Collaboration
